## **MARK SCHEME for the May/June 2014 series**

### **9706 ACCOUNTING**

**9706/23**

Paper 2 (Structured Questions – Core),  
maximum raw mark 90

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.

Cambridge is publishing the mark schemes for the May/June 2014 series for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level components and some Ordinary Level components.

- 2 (a) Non-current assets generate profit for the business (1). Depreciation is a fall in value of a non-current asset (1) due to wear and tear and other factors by making a charge against income generated (1) reducing the profit and thereby applying the prudence concept (1).

**1 mark per valid point (max. 3) [3]**

(b) (i) Wear and tear (1)

(ii) Obsolescence (1)

(iii) Technological innovation (1) [3]

(c) Rates of depreciation

Buildings =  $\$40\,000 / \$2\,000\,000 = 2\%$  (1)

Machinery =  $\$400\,000 / \$2\,000\,000 = 20\%$  (1)

Motor vehicles =  $\$100 / [\$ (700 - 300 + 100)] = 20\%$  (2)

(1) (1of) [4]

- (d) Assets suffer wear and tear, etc. and lose their value at different rates (1). This might depend on the degree of use of the asset. Vehicles tend to lose more value in the early years of use (1); hence the reducing balance method is more appropriate. Buildings tend to lose value (1) more consistently over their lifetime; therefore, the straight line method tends to be more appropriate (1). [4]

- 3 (a) Advantage: Easier to calculate (1) by avoiding the necessity to allocate and apportion costs into departments. (1)

Disadvantage: Where different products spend differing amounts of time in departments (1) there is a danger that product costs will be under or overstated. (1)
