Paper 1 Multiple Choice

October/November 2010

45 minutes

Additional Materials: Multiple Choice Answer Sheet
Soft clean eraser
Soft pencil (type B or HB is recommended)

* 4 5 1 6 1 5 3 9 8 2 *

READ THESE INSTRUCTIONS FIRST

Write in soft pencil.

Do not use staples, paper clips, highlighters, glue or correction fluid.

Write your name, Centre number and candidate number on the Answer Sheet in the spaces provided unless this has been done for you.

There are **forty** questions on this paper. Answer **all** questions. For each question there are four possible answers **A, B, C** and **D**.

Choose the **one** you consider correct and record your choice in **soft pencil** on the separate Answer Sheet.

Read the instructions on the Answer Sheet very carefully.

Each correct answer will score one mark. A mark will not be deducted for a wrong answer.

Any rough working should be done in this booklet.

A copy of the Periodic Table is printed on page **20**.

This document consists of **18** printed pages and **2** blank pages.

1 How do bacteria cause tooth decay?

- A They release acids that dissolve enamel.
- B They release alkalis that dissolve enamel.
- C They release enzymes that digest enamel.
- D They release ethanol that digests enamel.

2 Which row is correct for the blood in veins?

	direction of flow	oxygen content
A	away from heart	always high
B	away from heart	high or low
C	towards heart	always low
D	towards heart	high or low

3 What happens during anaerobic respiration in muscle cells?

- A carbon dioxide is released
- B energy is released
- C lactic acid is oxidised
- D water is released

4 The diagram shows a leaf, still attached to a plant, with both green and white regions that have been partly covered with black paper.

The leaf is left in bright light for six hours and then tested for starch.

Which area of the leaf turns blue-black after the starch test?

- 5 Which cells produce starch in their cytoplasm?
- A all animal cells
 B all plant cells
 C some animal cells
 D some plant cells
- 6 Which features are found in mammals but **not** in other vertebrates?
- A claws and hair
 B claws and lungs
 C hair and milk
 D lungs and milk
- 7 The diagram shows part of the digestive system.

Where does lipase digest fat?

- 8 Which internal conditions in a human being are maintained at a more or less constant level as the result of homeostasis?

	blood glucose	blood insulin	body temperature
A	✓	✓	✓
B	✓	✓	x
C	✓	x	✓
D	x	✓	✓

- 9 The alleles for a particular character are H and h.

Which term describes an organism whose genotype is Hh?

- A heterozygote
- B homozygote
- C phenotype
- D recessive

- 10 The diagram shows part of the carbon cycle which includes a food chain.

Which arrows are part of the food chain?

- A 1 and 2
 - B 2 and 3
 - C 3 and 5
 - D 4 and 5
- 11 The diagram shows a wind-dispersed, single-seeded fruit.

Structure P is an extension of which part?

- A cotyledon
- B leaf
- C ovary wall
- D testa

12 The diagram shows two stages in an attempt to kill a fly.

What else does the diagram show?

- A The fly converts impulses to stimuli.
 - B The fly responds to a stimulus.
 - C The hand produces impulses.
 - D The hand is a receptor.
- 13 The diagram shows a developing fetus.

Where does the fetal blood become oxygenated?

14 Which molecules join into long chains to make proteins?

- A amino acids
- B ethene
- C glucose
- D starch

15 The diagram shows a circuit.

Solid X makes the lamp light.

What is solid X?

- A rubber
- B silicon(IV) oxide
- C sulfur
- D zinc

16 The three states of matter are represented by diagrams X, Y and Z.

Which change occurs during condensation?

- A X to Y
- B X to Z
- C Y to X
- D Z to X

17 Sodium chloride solution is electrolysed and a gas is collected at each electrode.

One gas decolourises moist litmus paper, the other gas burns with a pop.

Which statement is correct?

- A Chlorine gas is collected at the anode.
- B Hydrogen gas is collected at the anode.
- C Oxygen gas is collected at the cathode.
- D The cathode is the positive electrode.

18 Compound X is heated gently with aluminium powder and sodium hydroxide solution.

The damp red litmus paper turns blue.

What does X contain?

- A carbonate
- B chloride
- C nitrate
- D sulfate

19 A student uses the apparatus shown to find out how many different pigments are in leaves.

What is this separation method called?

- A chromatography
- B distillation
- C evaporation
- D filtration

20 Which two elements are present in the compounds found in petroleum?

- A carbon and nitrogen
- B carbon and oxygen
- C hydrogen and carbon
- D hydrogen and oxygen

21 Carbon is used in the extraction of some metals from their ores because

- 1 carbon forms strong alloys with metals,
- 2 carbon reacts with oxygen in the ore.

Which of these statements are correct?

- A 1 only
- B 2 only
- C both 1 and 2
- D neither 1 nor 2

22 Which material is made from silicon(IV) oxide combined with metal oxides?

- A brass
- B glass
- C polythene
- D steel

23 Paint contains particles of solid finely dispersed in a liquid.

Which term correctly describes paint?

- A emulsion
- B gel
- C sol
- D solution

24 Rocks can be weathered by natural changes.

Which row correctly describes the type of change?

	X	Y	Z
A	chemical	chemical	chemical
B	chemical	physical	chemical
C	physical	chemical	physical
D	physical	physical	physical

25 100 cm^3 of a liquid has a mass of 85g.

How does the density of this liquid compare with the density of water (1 g/cm^3)?

- A Its density is higher than that of water.
- B Its density is lower than that of water.
- C Its density is the same as that of water.
- D It is impossible to say with only this data.

26 In separate experiments, an inert wire is dipped into two solutions, P and Q.

The wire is then placed in the flame of a Bunsen burner.

The table shows the results.

	solution P	solution Q
colour of Bunsen flame	yellow	green

Which metal ions are present in the solutions?

	P	Q
A	copper	calcium
B	copper	sodium
C	sodium	calcium
D	sodium	copper

27 Waste material buried underground can decay to form gas X which can be used as a fuel.

X burns to form an oxide Y and water.

What is Y?

- A** carbon dioxide
- B** nitrogen dioxide
- C** sulfur dioxide
- D** sulfur trioxide

31 Four speed-time graphs are shown below.

Which graph could **not** show the motion of a car being driven normally?

32 1 kg of water and 1 kg of aluminium are heated to the same temperature and then allowed to cool in a room.

Which of these could be a reason why the aluminium cools more quickly than the water?

- A** Aluminium does not evaporate but water does.
- B** Aluminium has a higher specific heat capacity than water.
- C** Aluminium has a lower specific heat capacity than water.
- D** Aluminium is a better insulator of heat than water.

33 The diagram shows a wave.

What are the amplitude and the wavelength of this wave?

	amplitude / cm	wavelength / cm
A	3	4
B	3	8
C	6	4
D	6	8

34 The diagram shows a ray of light passing from air into water.

What is the name of angle X?

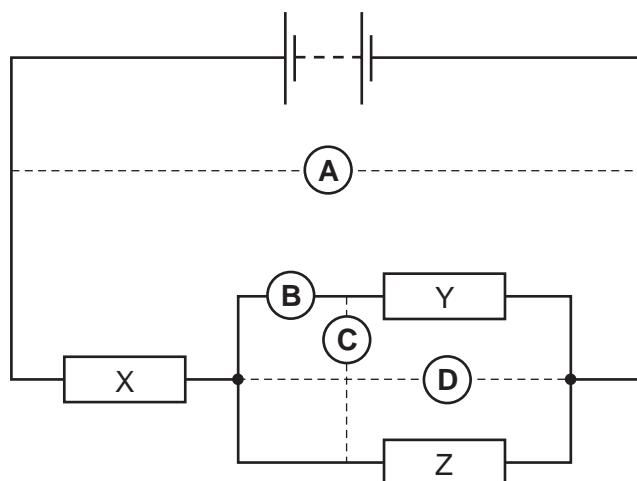

- A** the angle of incidence
- B** the angle of reflection
- C** the angle of refraction
- D** the critical angle

- 35 The pattern of field lines around a bar magnet on a sheet of paper can be shown by sprinkling metal filings on to the paper.

From which metal could the filings be made?

- A aluminium
 - B copper
 - C iron
 - D zinc
- 36 A circuit consists of three resistors, X, Y and Z, connected to a battery as shown in the diagram.
The potential difference across resistor Y is measured.
In which position should the voltmeter be connected to do this?

37 Which diagram shows a circuit that will allow the lamps to be switched on and off independently?

38 The diagram shows four electric kettles plugged into a 4-way adaptor.

An extension lead connects the adaptor to a single mains plug.

The mains plug is designed to work without a fuse.

Why is this use of the adaptor dangerous?

- A The extension lead connecting the adaptor to the mains plug will overheat.
- B The heating elements in the kettle will overheat.
- C The leads connecting the kettles to the adaptor will overheat.
- D The water in the kettles will overheat.

39 Compared with beta-particles and gamma-rays, alpha-particles

- A are the only radiation to carry a charge.
- B have the greatest ionising effect.
- C have the greatest penetrating effect.
- D have the smallest mass.

40 A small amount of a substance contains 72 billion radioactive atoms. The half-life of the substance is 4 hours.

How many radioactive atoms would remain after 12 hours?

- A 6 billion
- B 9 billion
- C 18 billion
- D 24 billion

DATA SHEET
The Periodic Table of the Elements

		Group																		
I	II	III	IV	V	VI	VII	O													
		1 H Hydrogen 1												4 He Helium 2						
7 Li Lithium 3	9 Be Beryllium 4											11 B Boron 5	12 C Carbon 6	14 N Nitrogen 7	16 O Oxygen 8	19 F Fluorine 9	20 Ne Neon 10			
23 Na Sodium 11	24 Mg Magnesium 12											27 Al Aluminium 13	28 Si Silicon 14	31 P Phosphorus 15	32 S Sulfur 16	35.5 Cl Chlorine 17	40 Ar Argon 18			
39 K Potassium 19	40 Ca Calcium 20											70 Ga Gallium 31	73 Ge Germanium 32	75 As Arsenic 33	79 Se Selenium 34	80 Br Bromine 35	84 Kr Krypton 36

*58-71 Lanthanoid series
†90-103 Actinoid series

a	X	b
---	----------	---

Key
a = relative atomic mass
X = atomic symbol
b = proton (atomic) number

The volume of one mole of any gas is 24 dm³ at room temperature and pressure (r.t.p.).
